SUMMARY

Backend Software Engineer with 7 years of experience building transactional business systems in Python (Django REST Framework) and PHP (Laravel). At Squeeze Asia, develops core services for suitebook, a hotel management platform, covering bookings, payments and refunds, kiosk and QR checkout, account settlement, and channel manager integrations. Skilled in REST API design, relational data modeling, and debugging production issues in money-handling workflows where correctness matters. Full-stack capable with React.js, and uses AI coding tools (Claude, Codex) daily for debugging, code review, and documentation.

EXPERIENCE

Software Engineer, Squeeze Asia, May 2022 – Present
suitebook (hotel management platform) · Python (Django REST Framework), React.js, MySQL, SQLite.

- Designed refund handling as offsetting negative payment entries rather than mutating original records, keeping the payment ledger auditable and settlement totals consistent across properties.
- Built per-property kiosk search configuration using bitmask flags, letting buildings customize behavior without schema changes or redeploys.
- Resolved channel manager (site controller) integration failures caused by mismatched OTA account IDs and room type codes, restoring inventory and rate sync for properties.
- Developed and maintained core modules including room booking, guest management, IC card activation, account settlement/unsettlement, kiosk payment, and QR payment workflows.
- Designed and implemented RESTful APIs for frontend and third-party integrations.
- Built React.js UI components and worked with PM, SQA, and engineering teams to deliver stable releases.

Software Engineer, A2A, Nov 2019 – Apr 2022.
PHP (Laravel, APIATO).
Land Map (property platform):

- Developed backend APIs for property listing, buying, selling, and renting.
- Designed database structures and transaction workflows.
- Improved scalability and maintainability using the APIATO architecture.

Minami Dictionary (mobile application):

- Built backend services for a Khmer-Japanese language-learning platform.
- Optimized search functionality and data retrieval performance.

TM Matching System (internal tool):

- Developed an internal platform to automate business matching processes.

EARLIER PROJECTS

- **A2A Odoo Renovation (Mar 2019 – Oct 2019):** Migrated an ERP system to a newer Odoo version while maintaining data integrity and system continuity.
- **Resort Booking System, vKirirom Pine Resort** (Jul 2018 – Mar 2019): Developed backend functionality for booking accommodations and activities.
- **Smart Check-in/Check-out System, vKirirom Pine Resort** (Jul 2017 – Apr 2018): Built a QR-based mobile room-access and check-in solution to reduce manual processes.

TECHNICAL SKILLS

Languages: Python, PHP, JavaScript, HTML, CSS
Frameworks: Django REST Framework, Laravel, APIATO, React.js
Databases: MySQL, SQLite
Core skills: REST API design, relational data modeling, API integration, performance optimization
AI tools: Claude, OpenAI Codex, ChatGPT
Spoken languages: Khmer (native), English (professional proficiency)

EDUCATION

Bachelor's in Software Engineering, Kirirom Institute of Technology, 2015 – 2019.
